Purpose

The purpose of this handbook is to provide the State Government Telecommunications Coordinators with the basic information about the telecommunications services provided by ITS and the procedures for requesting these services to meet the agency's telecommunications needs.

Telecom Services

The Telecom Services Division, Information Technology Services, is the voice, video, and data network service provider for state government. Telecommunications services are provided to agencies in the Capitol Complex, greater Jackson area, and throughout the state through approved contracts or by direct management and administration of these services. Volume purchasing and long term contracts enable the delivery of superior services at a much reduced rate than individual agencies can achieve on their own. All rates and services comply with federal regulations as established by OMB-A87.

The primary goal of the Telecom Services Division is to provide consistent, reliable telecommunications services statewide that meets or exceeds customer expectations. The Telecom Services Customer Support Representative team works closely with agency Telecommunications Coordinators to assure accurate and timely processing of service requests.

Specific Responsibilities of Telecom Services:

- ✓ Provide reliable telecommunications services and customer support.
- ✓ Assist Telecom Coordinators in maintaining up-to-date records for agency communications, employees, equipment and services.
- ✓ Monitor agency use of telecommunications services for the specific purpose of identifying products and services that may enhance productivity.
- ✓ Coordinate disconnects, installations, and moves of voice and data lines as well as the maintenance of telephone equipment.
- ✓ Provide access to local and long distance calling facilities using authorization codes, calling cards and unrestricted facilities.
- ✓ Provide conferencing services, consulting, directory assistance, a State government directory, toll-free services, training and voicemail which features a web client.
- ✓ Provide the installation, maintenance, testing and certification of data cabling for LAN applications.
- ✓ Coordinate the provision of Centrex and Business services through AT&T to agencies statewide.

Customer Service and Support:

- ✓ Service order processing
- ✓ Statewide bill management
- ✓ Custom billing and vendor bill audits
- ✓ Call Center and Automated Call Distribution (ACD)
- ✓ Network Operations Center / Help Desk – 24x7x365
- ✓ Telecommunications troubleshooting and repair
- ✓ Telecommunications training and consulting
- ✓ State telephone directory (on-line and printed)

Telecom Services

Organizational Structure

Customer & Vendor Billing

Vickie Coghlan, Assistant Director

Brad Chandler – Customer Invoice Administrator

Jessie Cheeks – Systems Programmer

Susan Lightsey – Customer & Vendor Bill Analyst

Stacy Walker – Customer Invoice Administrator

Major duties include:

- Verify and process voice and data related vendor bills
- Process and rate Telecom Service bills for customer usage
- Analyze cost allocation and recovery models
- Create monthly financial and inventory summary reports
- Receive customer calls for telecom bill and cost center modifications
- Use, manage, and modify telecom management system for better customer service (user interfaces, web access, electronic billing, agency reports, etc.)

Customer Support Representatives

Juanita Dennis, Assistant Director

Debbie Britt, Special Projects Manager

Terri Heidelberg, CSR/QA Manager

Shirley Brown, CSR

Kim Marbury, CSR

Helen Fowler, CSR

Pat Oden, CSR

Greg Wilkins, CSR

Lori Rutland, Customer Advocate/Online Billing Coordinator – Conferencing, directory, special requests, website

Major duties include:

- Process customer service requests
- Provide training on Capitol Complex and Centrex systems
- Conduct station reviews for inventory, billing verification and major projects
- Establish new Centrex service areas throughout the state
- Call Center administration for ACD groups and CMS reporting
- Bureau of Buildings project management which includes station reviews, set deployment, feature programming, training and follow-up visits.

Data Network

Steven Walker, Assistant Director

Foster Fowler, Data Network Technician

Glenn Hinkle, Data Network Technician

Lisa Kuyrkendall, Voice Network Technician

Cam Proctor, Data Network Technician

Gale Terry, Data Network Project Manager

Kent Tolbert, Voice Network Technician

Major duties include:

- Administer State data network (MPLS, Internet, ATM, Frame Relay, MetroE)
- Administer Capitol Complex fiber network and Computer Center access (MetroE)
- Process customer service requests for the Capitol Complex and statewide services from initial request through order completion
- Network security
- Project management for large network migrations (Legacy services to MPLS)
- Statewide data network inventory (circuits, equipment, maintenance, etc.)

Voice Networks

Dennis Bledsoe, Assistant Director

Timika Franklin, Voice Network Technician

Jeff Jennings, Capitol Complex Service Manager

Joey Baldwin, Service Tech

Jimmy Craig, Service Tech

Paul Neumann, Service Tech

Robin Steen, Voice Network Technician/Backup Installer

Gary Turner, Infrastructure Manager

Mike Voorhis, Voice Network Technician

Major duties include:

- Voice systems administration for Capitol Complex and Mental Health facilities
- Statewide voice systems administration (Centrex-customer control, Business lines, ISDN, Memory call, voicemail, etc.)
- Access to local service, toll free, long distance, etc.
- Cabling and installation for voice and data within the Capitol Complex
- Bureau of Buildings project management (cabling and installation)
- Station reviews, projects, call centers, training

Service Center

David Richards, Manager

Willie Byrd, System Analyst

Andrew Westerfield, System Analyst

Major duties include:

- Data Network and telephone issues
- Domain Name System requests
- Open Systems requests and issues
- Mainframe requests and problems

Telecommunications Coordinator

Roles & Responsibilities

Telecommunications Coordinators serve as the single point of contact designated by a State agency to interface with ITS Telecom Services on all telecommunications needs for the agency. Telecom Services considers the Telecom Coordinator or agency contact person to be the agency's *official voice* on all requests for telecommunications products and services. This individual must have sufficient agency knowledge and authority to fulfill the responsibilities defined under "Specific Responsibilities of a Telecommunications Coordinator" (see below). It is strongly suggested that each agency designate a Telecom Coordinator backup who is equally knowledgeable of their telecommunications needs and can take over the primary contact person's duties in their absence.

Specific Responsibilities of a Telecommunications Coordinator:

- ✓ Understand and clearly convey to Telecom Services the agency's communications needs.
- ✓ Review all communications requests within his/her agency to ensure compliance with Telecom Services and agency guidelines.
- ✓ Determine user needs and approve requests for service and equipment that are in compliance with established guidelines.
- ✓ Coordinate with Telecom Services on all telecommunications projects and services including:
 - Earliest possible notification of major projects, moves and changes
 - Submission of plans and due dates related to the project
 - Submission of completed service request forms
- ✓ Monitor services and expenditures to eliminate unnecessary costs including expedites.
- ✓ Assist Telecom Services in maintaining up-to-date records of agency communications, employees, equipment and services.
- ✓ Monitor the agency's use of telecommunications services for the specific purpose of identifying products and services not being used.
- ✓ Verify all adds, moves, and changes ensuring proper completion of services before the service technician leaves the premises; and notify Telecom Services immediately when a service request has not been properly processed.
- ✓ Obtain a copy of the service order form from the service technician at the time the work is completed; verify work item and hours worked and sign the service order form; and keep the service order form on file in your agency for future verification of billed costs.
- ✓ Verify that funds are available before forwarding service requests to Telecom Services.
- ✓ Verify all agency and employee listings for the State Government Telephone Directory and provide changes to Telecom Services.

How to Place a Service Order

Starting on page 55 there are examples of the two different service requests forms as well as the programming template forms for the telephone sets. An electronic version of these forms can be found on the ITS web page at: http://www.its.ms.gov/ts_customer_support.shtml.

1. Determine which request form to submit by the type service needed.
2. Make sure that the Agency/Telecom Coordinator/Site Contact portion of the form is completely filled out. It is very important that the Cost Center information be correct.
3. Provide a complete description of the work being requested.
4. Include the set template form when requesting a new set or changes to an existing set.
5. On new line installs make sure that the dialing restrictions are indicated. For example: if authcodes are used by the agency, then mark "Restrict".
6. Prior to requesting a name change on the display for an existing number, determine if the number has voicemail. If the existing number has voicemail then in the "Description of work requested" section be sure and ask for the name on the voicemail to be changed or

If assistance is needed when completing a request form, please contact the Telecom Services Customer Support Representatives at 601-432-8033. Requests may be submitted via email to telecomrequest@its.ms.gov or by fax to 601-432-8100.

Who to Call?

The Department of Information Technology Services, Telecom Services has numerous departments and personnel to provide support to its customers. Please contact the appropriate department listed below for assistance.

For questions concerning...

Service requests including voicemail
toll free numbers, authorization codes, calling cards,
conferencing information, training, data network

Troubles with Data Network (MPLS), facilities,
Mainframe, Open Systems, telephones

Business Class DSL trouble

Telephone bill inquiries and reports, Bill Analysis

State Directory Assistance
State Government Operator

Publication & Distribution of
State Government Telephone Directory
Update On-line Directory

Call or email ...

601-432-8033
telecomrequest@its.ms.gov

601-432-8080
866-850-5173
service.center@its.ms.gov

866-297-5143

601-432-8210
vsbilling@its.ms.gov

601-359-1000

601-432-8107
telecomrequest@its.ms.gov

ALL service requests must be submitted on the appropriate service request forms (**SEE Forms Section**) and signed by the appropriate authorized representative. Service request may be submitted in any of the following manners:

EMAIL 

telecomrequest@its.ms.gov

FAX 

601-432-8100

MAIL 

ITS – Telecom Services
3771 Eastwood Drive
Jackson, MS 39211

Repair Services

Hours of Operation

24/7/365

Submit all trouble reports to the ITS Service Center by phone at **601-432-8080** if in the Jackson local calling area, **866-850-5173** outside of the Jackson local calling area or by emailing service.center@its.ms.gov.

Service Center Checklist:

1. Agency Name
2. Agency Telecom Coordinator's name & telephone extension
3. Telephone number of line experiencing trouble
4. Physical location
 - a) Address
 - b) Building name
 - c) Office, room and/or suite number
 - d) Jack number if available
5. On-site contact person & telephone number
6. Description of the problem including type set

Note: Depending on the type of system or trouble, other information may be required when reporting troubles for Centrex, Tone Commanders, circuits, telephone sets, etc.

Trouble Shooting

What to do When. . .

Bad handset or handset cord, REPORT TO TROUBLE LINE...

- When a telephone has static or is cutting off when the handset is moved
- When a single line telephone is dead using the handset but has dial tone using the speaker phone
- When a multi-line telephone is dead and the buttons have lights

Cancel Send All Calls or SAC ...

- Cancel SAC by getting dial tone and press #3
When a telephone is not ringing on the set and calls are covering immediately to a designated location such as a receptionist or voicemail, more than likely the SAC feature has been activated.

Cancel Call Forward ...

- Cancel Call Forward by getting dial tone and pressing #2
When a telephone is not ringing on the set and not covering to the designated location such as a receptionist or voicemail, it has probably been forwarded.

Check the dialing mode on a single line telephone, and set to tone instead of pulse...

- When the telephone extension that is in a call pickup group stops working
- When entering voice mailbox password and system states password is invalid
- When dialing a long distance number and system does not accept authorization code
- When dialing an outside call and reaching the operator or the wrong number
- When dialing a 5-digit extension and reaching the operator or the wrong number

Capitol Complex Services

Avaya Modular Messaging

Avaya Modular Messaging (MM) is a unified messaging solution that provides a single-point of access to voice, fax, and text messages. Messages can be accessed using the Telephone User Interface (TUI) or the Web Client.

The telephone user interface allows you to dial into your mailbox from any telephone. The text-to-speech feature converts text messages and fax subjects, so you can listen to them as conveniently as you can to voice messages. Fax and text messages can be printed.

The MM Web Client allows you to create, send, forward, reply, retrieve, and listen to voice, fax, and text messages from your desktop computer. Message headers indicate the type of message (voice, fax, or text), the sender name, and the message subject, allowing you to easily select a message and quickly act on it.

What's different and new with MM?

- ① Login procedures
From your personal extension, MM states your system generated name and prompts for your password.
- ① Internet access to MM Web Client via your PC inside and outside the Capitol Complex
Use the URL <http://vmail.its.ms.gov> to access the MM Web Client.
- ① Text-to-speech Playback
Text messages and fax subjects are converted to speech and can be listened to via the telephone or local player.
- ① Extended Absence Greeting
Record and use an extended absence greeting when you're away from the workplace for an extended period of time. When it is active, it overrides the personal greeting and remains active until you deactivate it. When you login your mailbox, the system prompts you to either retain it or deactivate it.
- ① Text Message
Type and send a text message.
- ① Notify Me
Setup an outcalling notification schedule and have the system notify you via blackberry, pager or telephone.
- ① Call Me
The system makes notification calls to the telephone numbers in your designated phone list when callers leave messages that meet certain criteria.

Text messaging, notify me and call me schedules are only accessible through the Web Client.

Modular Messaging (MM) Mailbox Initialization

Modular Messaging Access Number – Inside the Capitol Complex: 96400

Modular Messaging Access Number – Outside the Capitol Complex: 601-359-6400

LOGIN

From your office extension

- ① Dial the MM Access Number 96400 (hear system generated name)
- ① Enter your password and press [#]

From a different office extension

- ① Dial the MM Access Number 96400
- ① Press [*][#] when the MM answers
- ① Enter your mailbox number (same as your 5-digit extension)
- ① Enter your password and press [#]

From a phone outside the system

- ① Dial the MM Access Number 601-359-6400
- ① Press [#] when the MM answers
- ① Enter your mailbox number
- ① Enter your password and press [#]

Initial Mailbox Setup/User Tutorial

MM will walk you through a tutorial to initialize your mailbox. You will change your password and record your name.

- ① Write down new password _____ to be entered when system prompts to change it.
 - ① Passwords should be 8 to 15 digits cannot begin with zero (0); cannot be the mailbox number; cannot be repetitive numbers, such as 1111, 1212, etc.
1. Dial into the MM using the steps above.
 2. Enter your temporary password when prompted (temporary password is 96400).
 3. MM will prompt you to create your new password.
 4. Record your name or accept the system generated name.
The MM will play your system generated name; you will be prompted to accept it or record your name.
 5. Record and active Personal Greeting.
Select option 3 and follow the prompts.

Broadcast Message

Broadcast messaging is a mass calling technology that allows a voice message to be sent to all voicemail subscribers at once.

Note: Broadcast messages must be recorded and scheduled to be sent five days prior to the date of the actual event.

Please contact the ITS Telecom Services CSR Team at 28033 if you need to send a Broadcast Message.

Holiday Announcement Board Recording Instructions

1. Dial 879 and the 5 digit announcement number
2. To delete the current recording, press 3.
3. Hang up and redial 879 and the 5 digit announcement number.
4. Press 1 to record the announcement. Once you are finished recording, press #.
5. Press 2 to replay your recording.
6. To delete and redo the recording, press 3 and follow steps 3 and 4. (Allow 30 seconds for announcement to update.)

Call Center

A Call Center is a facility that answers inbound telephone calls. A typical call center consists of trained staff who respond to customer inquiries. These call centers are equipped with state of the art telephony and computing technologies, which assist the agent to handle calls and provide correct information.

When a customer calls the agency to access its services, the call is received by the call center. The call center agent responds by providing information, products or services. These teams of agents respond to a large number of calls a day, ranging from technical help, order processing, servicing and billing accounts.

Center Vu Supervisor

Center Vu Supervisor is a database, administration, and reporting application designed for enterprises that receive a large volume of telephone calls and have complex contact center operations. Working in conjunction with CMS, the Call Management System Supervisor client provides comprehensive administration and reporting capabilities using a familiar Microsoft Windows interface.

With CMS customers can view live, real-time information and see the immediate results of their adjustments. They can also use historical reports to analyze trends, establish performance benchmarks, and plan new marketing or customer service campaigns. Supervisors have access to real-time and historical reports to help them effectively manage the performance of their personnel. Extensive reporting of exceptions allows managers to quickly identify areas requiring immediate attention.

Call Center Instructions

To Log-In to the Call Center and start receiving calls:

1. Press the LOGIN button on your telephone.
2. The green light or arrow (depending on type set) beside the LOGIN and AUX-WORK button will come on.
This allows you to receive internal and external (non-call center) calls.
3. Press the AUTO-IN button on your telephone. It will light up green or arrow (depending on type set) and the green light or arrow beside the AUX-WORK button will go off.
4. You will now start receiving calling within the Call Center.

To Log-out of the Call Center:

1. Press the LOG-OUT button. The green light or arrow (depending on type set) will go off.
2. You are now logged out the Call Center.

Aux-Work Button

This button keeps your logged into the system, but tells the system not to send Call Center calls to your telephone until you press the AUTO-IN button.

***Note: This feature is typically used during breaks and lunch.*

Q-CALLS

This buttons allows you to view the number of calls holding in queue and the length of time the longest call has been holding.

MANUAL CODES – FOR YOUR INFORMATION ONLY

890+5-DIGIT AGENT NUMBER – LOG IN

891 – AUX WORK

892 – AUTO IN

898 – LOG OUT

Additional Information on Call Center calls and Agent calls.

- If you are not logged into Aux Work, you will not receive calls to your station number
- If you walk away from your desk and the system sends a call to your phone and you don't answer, the system will log you out of the call center.
- If you are talking to someone that came through the call center, you will still be able to receive a call directly on your telephone.
- The system will send only one call center call at a time.
- If you have busy indicators on your telephone, you can only use the button to call the employee, it will not go to their coverage path. In order to send a call to their voicemail, you will have to dial the 5-digit agent number.
- If you are not logged in (aux-work), you will not be able to make long distance calls.

EC 500 Extension to Cellular

EC500 Extension to Cellular (EC500) is a mobility solution that enables you to receive business calls where you are, not where your desk is. Welcome to being connected wherever you are! Instead of being tied to your desk waiting for a call, with EC500, calls to your office number are extended to your cell phone, allowing you to receive work-related calls wherever you are and whenever you need to.

EC500 is ideal for anyone who conducts business on the go — field service personnel, physicians, attorneys, engineers, operations staff, consultants, and other mobile professionals. Even telecommuters working in their home offices can use EC500 to make the transition from office to home transparent to callers. With EC500, incoming calls to your office number reach you on the road, at another location, or even walking around the workplace. This “one number reachability” means you can respond immediately to urgent business matters. When you can’t respond, your work station voice mail picks up your messages. In addition, if you have a call in progress on your cellphone from your work desk number, the call can be switched back to your desk phone with the push of a button.

EC500 works with any type of wireless/cellular service. You control your availability by enabling or disabling EC500 as needed. Whether connected to EC500 or not, your cell phone still operates as it always has. You still receive personal calls on your cell phone, because personal calls come in through your standard cellular number and service provider.

Requirements:

1. Digital/Multi-line 64 Series & 24 Series telephones ONLY.
Note: EC 500 is not compatible with 84 Series digital/multi-line telephones or analog/single line sets.
2. Two (2) programmable buttons on a multi-line telephone are required to add EC 500 features
 - One button is used to forward the extension to the cell phone when you will be out of the office.
 - The second button can be used for extended cellular which is used to forward a call already in progress from the extension to the cell phone so that you can leave your office while continuing your call.
3. Employee telephone extension and cellular telephone number.

Disclaimer: If you use EC 500 with a State Government issued cellular telephone, you must comply with your agency’s acceptable use policy and State Legislation that is it used for business purposes only.

Other Services

Memory Call

Voice Mail Flat Rate Service (Octel)

With Memory Call Voice Mail Flat Rate Service, your voice messages are saved in a mailbox when your line is busy or you can't answer. You can pick up your messages from any touch-tone phone. You can also be notified of messages by pager or phone.

Set Up a Mailbox

Write down a greeting that you want callers to hear and time it. The greeting can be up to 90 seconds. Then just take your time and follow the friendly voice instructions.

1. Dial your Memory Call access number.
NOTE: If you're not at your own phone, when the service answers, press [] and enter your mailbox number. (Your mailbox number is your 10 digit phone number.)*
2. Enter your temporary password and press [#].
NOTE: Temporary password is either your 7 digit phone number, no area code or 10 digit phone number.
3. Enter your new 4- to 15-digit password and press [#].
4. Record your mailbox name and press [#].
5. Record your personal greeting and press [#].
You're now at the main menu.

Mailbox Highlights

- Callers can leave messages up to 2 minutes long.
- Your mailbox holds up to 30 new and saved voice messages. When your mailbox is full, callers are asked to call again.
- New messages are stored for 14 days and then erased automatically.
- Saved messages are stored for 7 days.

Do I Have Messages?

When you pick up your phone and hear short tones, you have messages. If you're at another touch-tone phone, dial your access number and log into your mailbox. You'll hear how many new and saved messages you have and how to review them.

You can also arrange to have a light or display attached to your phone. When you receive a message the visual signal goes on. Once you listen to your messages, the light or display goes off.

You can set up your message notification schedules so you'll be alerted to new messages as they are left in your mailbox.

Go to the Main Menu

All Memory Call activities begin at the main menu.

1. Dial the access number.
If you're calling from your own phone, move to Step 2.
If you're calling from another phone, when the service answers, press [*] and enter your mailbox number.
2. Enter your password

Memory Call - continued

Main Menu

To	Press
Review messages.	1
Send messages. (If available)	2
Check receipt of sent messages. (If available)	3
Go to Personal Options to change greetings or password or set up Message Notification.	4
Exit from the Memory Call service.	*

Playback Keys (Use these keys while listening to a voice message)

To	Press
Rewind the message 10 seconds.	1
Rewind to the beginning of the message.	11
Pause the message 20 seconds. (Press 2 to resume.)	2
Fast forward the message 10 seconds.	3
Fast forward to the end of the message.	33
Quick erase a message.	337
Slow down the message.	4
Hear the time and date a message was left.	5
Speed up the message.	6
Return the volume to normal.	8
Increase the volume of the message.	9
Skip to next message.	#
Skip to saved messages.	##
Stop reviewing the message.	*

Memory Call - continued

Use these keys once you've heard the message:

To	Press
Erase the message. (Once you erase a message, it can't be retrieved.)	7
Reply to the message (If available).	8
Save the message.	9
Go to More Options.	0
Replay the entire message.	4
Hear the "message envelope" (the date and time the message was sent, the sender, and the length of the message).	5
Send a copy of the message to another Memory Call subscriber.	6

Reply to a Message

If you receive a message from another Memory Call subscriber, you may be able to reply directly to that person's mailbox without having to hang up. If this option is available, follow the voice instructions to reply.

Send Voice Messages

Record and send a message to another Memory Call subscriber mailbox.

1. Press [2] from the main menu.
2. Record your message and press [#].
3. Enter the destination mailbox number.
4. Press [0] to choose a delivery option (optional).

To	Press
Mark the message private.	1
Mark the message urgent.	2
Request message confirmation.	3
Mark the message for future delivery. (You'll be asked to schedule the time and date.)	4

5. Press [#] to send the message.
 - Repeat Steps 3-5 to add more destinations.
 - Press [*] if no more destinations.
6. Press [*] to return to the main menu.

Memory Call - continued

The Personal Options Menu (Option 4 on the Main Menu)

To	Press
Turn Message Notification on/off	1
Select Administrative options	2
Change greetings and name	3
Establish or change notification schedules	4

Message Notification

With the Memory Call service, you can set up your mailbox to let you know when you have new messages. You'll be notified by local telephone or pager. There are 2 regular schedules and a temporary schedule. You may wish to use the first schedule for notification to your pager or telephone number during business hours, and use the second schedule for another number, perhaps your home, for notification after hours and weekends. You can also choose to be alerted to urgent messages only.

First set up a schedule for notification. You have these choices.

- Schedule 1 can be used for pager or telephone
- Schedule 2 is for telephone notification only
- The temporary schedule overrides both schedules for the number of days you specify; for example, on holidays

Set up your pager and telephone notification schedules

- At the main menu, press [4][4]
- Press [1] for pager schedule (pager or telephone)
Press [2] for second schedule (telephone only)
Press [3] for temporary schedule (telephone only)

Follow the voice instructions to set up the notification schedule. Listen to all options before making your selections. The information you entered will be repeated to give you an opportunity to confirm or change. You can now turn notification on or off. Your schedules will stay as you set them until you change or cancel them.

Memory Call - continued

Turn notification on or off

1. At the main menu, press [4] for Personal Options
2. Press [1] and listen to the voice instructions

When new messages are left in your mailbox, you'll be called at the phone number you specified in your schedule or receive a pager notification. If you're called at a telephone number, you'll hear a recorded announcement. If the line is busy or you don't answer, the MemoryCall service tries 3 more times at 20-minute intervals. If you use pager notification, when you receive a new message, a digital pager displays a series of 7's and a tone pager beeps. Voice pagers are not compatible with the MemoryCall service.

Urgent Message Delivery Option

You can tell selected callers how to mark their message as "urgent." When they finish recording a message, they should press [1][1][2].

Passwords

Your password is important and private — not even AT&T knows it. If you forget it, AT&T will reset your mailbox, but all messages will be lost.

TIPS

- Your callers can skip your greeting by pressing #
- Record an extended absence greeting to let your callers know you won't be available for a while. Callers can't press # and skip this greeting. You can also use this feature to make sure callers can hear your entire greeting
- You can set up your voice mail so callers can speak to someone else, such as a receptionist or secretary. Just give AT&T the phone number of the person who will answer. Then change your greeting to include: "Press 0 to speak to...."
- You can record any greeting, just as long as it's under 90 seconds. Here are some sample greetings to help get you going.

Memory Call - continued

CENTREX

Centrex is a voice communications system that uses the power of AT&T Central office to provide internal and external communication service to business. Centrex is a type of phone service offered by local exchange carriers that provide PBX like functions to a group of users without the need of premises based equipment. Despite having individual single line phones connected to the central office, users are able to dial each other by extensions, transfer calls, etc.

Below is a list of locations that currently have Centrex service and the dialing patterns required to utilize the phone system:

Business Class DSL

Asymmetric Digital subscriber line (DSL) is a broadband Internet connection delivered through existing telephone lines to residential and office buildings. It enables faster data transmission over copper telephone lines than a conventional voice band modem can provide. DSL does this by utilizing frequencies that are not used by a voice telephone. DSL technology uses multiple frequencies that allow you to use the same telephone line to make regular phone calls and access the Internet. Special DSL filters split the frequencies in phone lines into two bands. The higher frequency is reserved for the DSL modem, and the lower frequency is used to make telephone calls.

At the telephone exchange the line generally terminates at a DSLAM where another frequency splitter separates the voice band signal for the conventional phone network. Data carried by the ADSL is typically routed over the telephone company's data network and eventually reaches a conventional internet network.

DSL Speeds

- Up to 1.5Mbps downstream, Up to 256Kbps downstream
- Up to 3.0Mbps downstream, Up to 384Kbps downstream
- Up to 6.0Mbps downstream, Up to 512 Kbps downstream

DSL Equipment

- DSL modem or DSL modem is a device used to connect a single computer
- DSL Router or DSL Router is a device used to connect up to 4 standalone PC's or network multiples computers *See AT&T Service request form to order DSL.

Disclaimer: DSL and/or requested speed may not be available in all locations. Customer is responsible for reporting all DSL troubles directly to AT&T by dialing 866-297-5143.

Toll Free Services

Toll Free Service allows calls to be completed to a location without a charge to the caller. The caller dials a number in the format 8XX-XXX-XXXX and the call is routed and billed to the called party. The toll free service can be nationwide or restricted to calls placed from within Mississippi, and can optionally exclude calls placed from the local calling area of the Toll Free number.

Billing Rates

\$.03/minute intrastate/interstate

Cost + \$0.25/call international

When submitting a Toll Free request, please allow 7-14 days for completion of the order. When requesting a vanity number be advised that they are rarely available. If requesting a vanity number, please submit 10 to 20 numbers at one time.

Conferencing Services

SERVICE	COST PER MINUTE PER PARTICIPANT*
Reservationless Toll-Free Conferencing	\$.12
Passcode Toll-Free	\$.17
Toll-Free Meet-Me (Operator Assisted)	\$.22
Operator Dial-out	\$.25
Operator Dial-out (international)	\$.25 plus outbound rate for particular country
Document Sharing/Web Conferencing	\$.30 (includes audio)
Audio Streaming – live call	\$.26/plus \$375.00 set-up fee if less than 100 participants on the audio call
Universal Service Fund may apply on InterState usage (9.9%)	

*Pricing effective July 2008

Reservationless conferencing is a flexible and cost-effective conferencing solution that is secure and easy to use. It's an automated service that gives you total control and allows you to meet anytime, anywhere. You will dial the same toll-free number and room number every time without having to schedule the call in advance. You can host a meeting anytime with up to 125 participants. To begin the conference call, simply dial the Reservationless toll-free number and room number; the conference call is active after the moderator dials in and enters the Personal Identification Number (PIN). The moderator does not have to remain on the line throughout the duration of the call, but must dial into the conference to establish it.

Passcode conferencing provides an automated service that allows you to schedule a call in advance by speaking to a reservationist. Each time a call is scheduled, a new access number and passcode will be provided to you.

Operator Assisted conferencing is designed to specifically handle calls that require enhanced services as well as a more personal touch, from a live conference coordinator. Some enhanced features include: full time conference coordinator monitoring, digital replay of conference, cassette/cd recording of conference, sub-conferencing, electronic polling, and managed question and answer session. Additional fees are applied for the enhanced features.

Operator Dial-out conferencing is prescheduled via a toll-free number. You supply Qwest with a participant list, including names and telephone numbers and the operator calls the participants and places them into the conference.

Document Sharing integrates audio and web conferencing, enabling you to share your presentations and applications over the Internet. Go to <http://qwest.conferencing.com> to sign up for an on-line live Web conferencing demonstration. Demos are offered every Tuesday at 10:00 a.m. MST. The demo is approximately 20 minutes in length.

Audio Streaming is a way of communicating with a large audience by broadcasting live to an unlimited number of participants using the Internet. Participants listen to an audio broadcast using their Web browser.

To request setting up an account, email telecomrequest@its.ms.gov with the following information: Agency Name, Division Name, Division Telephone Number, Cost Center (to bill charges), Person's Name (Moderator).

Data Network Services

The following types of data network services are currently available. The primary use of MPLS-based services is for connectivity to the State Data Center, intra-agency connectivity, inter-agency connectivity and secure access to and from the Internet. Telecom Services will work with your agency on the design and implementation of the appropriate type of connectivity based on the network requirements. Requests for VPN, Firewall and DNS services associated with the state network will be assigned to a Data Network Engineer for implementation.

- MPLS-based DSL
- MPLS-based Frame Relay
- MPLS-based Fiber-Based Services
- VPN Services
- Firewall Services
- Domain Name Services (DNS)

Requests for MPLS-based services should be submitted via email to the following address:

telecomrequest@its.ms.gov

Requests for VPN, Firewall and DNS services should be submitted to:

service.center@its.ms.gov

Business class or commodity DSL is also available under contract, but is not intended for mission critical, intra-agency connectivity. Commodity DSL services are considered “best effort” and are not supported by Telecom Services Network Operations Center or the AT&T State Government Account Team. Agencies should contact Telecom Services about using DSL services prior to an order being placed.

Telecommunications Glossary

Abbreviated Dialing

A feature that permits the calling party to dial the destination telephone number with fewer than the normal digits. Abbreviated Dialing numbers must be set up before using them. Speed Dialing is a typical example of Abbreviated Dialing.

Agent

A customer service person whose job is to handle outgoing or incoming telephone calls, for example, an agent in an ACD group.

Agent ID

A 5-digit number assigned to identify an ACD agent. Agents use this number when logging in for service. It is not associated with any particular telephone set.

Auto Attendant

A device or a feature of some voicemail systems that answers a call and lets the caller route their call to a specific extension or group

Auto Callback

A feature that allows internal users who place an internal call to a busy or unanswered telephone to be called back automatically when the telephone becomes idle.

Automatic Call Distribution (ACD)

A switch feature that permits incoming calls to terminate to the most-idle telephone in a group of telephones.

Authorization Code

A seven digit numeric code that must be entered to dial long distance numbers to control telephone billing. Authorization codes can protect against telephone abuse and is a way to track calls back to the person or project originating the calls.

Auto-dial (AD)

This feature is used on a multi button set and allows a customer to key in frequently dialed number on a button that will dial the number for you.

Auto In

An ACD work mode that makes the agent available to receive calls and allows the agent to receive a new ACD call immediately after disconnecting.

Automatic Incoming Call Display

Enhances the display feature by providing automatic identification of incoming calls. Calls are displayed for 30 seconds before redisplaying the information associated with the currently active call.

Billing

Invoice sent to the customer with itemized charges and backup that is associated with each charge.

Bridged Call Appearance

The appearance of a telephone primary extension number at another telephone allowing the call to be handled from more than one telephone. Telephones with bridged appearances must have a primary extension assigned.

Glossary - continued

Busy Indicator (BI)

This feature is used on a multi line set and it allows a customer to see if a station is active or to speed dial the user.

Button-View (BtnVu)

Allows multi-appearance users to verify numbers and features programmed on the buttons.

Calling Card

A physical object, often in the form of a wallet-sized card made of plastic or paper, which contains contractual information as to using postpaid or prepaid long distance services from the calling card provider.

Call Center

Call Center is a functional area within an organization that exists solely to answer inbound or place outbound telephone calls.

Call Coverage

Provides automatic redirection of calls to alternate answering positions in a call coverage path based on specified criteria. A coverage path can have up to six points of coverage. Forwarded calls are redirected to the coverage path. Redirect notification (ring-ping) can be set on a per station basis.

- Single coverage paths direct inside and outside calls to the same coverage points.
- Dual coverage paths provide separate coverage for different types of calls.
- Send All Calls (SAC) sends all calls to coverage immediately.

Call Forward

A feature that allows users to redirect calls to another extension. This feature overrides call coverage.

Caller ID

Caller identification is an optional telephone service that provides a receiving telephone device with the phone number of the originating caller, which can be displayed to the destination person prior to receiving the call.

Call Management System (CMS)

A software product used by customers receiving large volume of calls that are processed through the ACD feature of the switch. The CMS collects call-traffic data, formats management reports, and provides an administrative interface to the ACD feature.

Call Park

Allows users to put a call on hold at their telephone, and retrieve the call from another telephone within the system. The call can be picked up from any phone within the 2 minute threshold.

Call Pick-Up (#4)

Allows anyone within a specified pickup group to answer at their own telephone, a call that is ringing at another extension within the group.

Call Vectoring

They dynamic fine-tuning of call handling to balance call loads based on time of day, day of week, holidays, number of agents, number of waiting calls, time in queue, and much more.

Glossary - continued

Central Office (CO)

Central Office (CO) is the local switching facility of a telephone company to which telephones are connected. Central Office is a common carrier switching center in which trunks and loops are terminated and switched. Synonyms exchange, local central office, local exchange, local office, switching center, telephone exchange.

Centrex

Centrex is central office exchange service, a type of PBX service in which switching occurs at a local telephone station instead of at the company premises. Typically, the telephone company owns and manages all the communications equipment necessary to implement the PBX and then sells various services to the company. With Centrex, there is no onsite switching at the customer premise and all customer connections go back to the Central Office of the service provider.

Circuit

The physical connection of channels, conductors and equipment between two given points, includes both transmitting and receiving capabilities

Conference Bridge

A telecommunications service which permits callers from several diverse locations to be connected together for a conference call. Users dial a toll-free number and enter a room number to access the conference bridge.

Conference Call

Allows multi-appearance users to conference up to six parties on a call (including yourself) so you can discuss a 6-way discussion. Single-line users can also have six parties on a conference call, with the assistance from other users.

Cord

Handset cord - the curly cord that goes from the phone to the handset

Wall Mount cord - the flat cord between the wall jack and the phone.

Cost Center

A three digit code used to identify what agency, department, or functional area to which cost are to be allocated.

Coverage Answer Group

Consists of a group of up to eight telephones used to handle redirected calls. All telephones ring simultaneously allowing anyone in the group to answer the call. Once the call is answered, the temporary bridge with the other telephones is dropped.

Dial Tone

The tone that is heard when accessing an outside line.

Direct Inward Dial (DID)

A feature that enables callers to dial directly into an extension on a PBX and not use an auto-attendant. Dialing a number to reach a specific person or department. That call would only ring at the specified phone.

Glossary - continued

Digital Subscriber Line (DSL)—

Digital Subscriber Line is the medium for transferring data over regular telephone lines and can be used to connect to the Internet.

Extension Number

Four or five digit number that identifies a phone or other voice or data equipment connected to the system.

Fax/Modem Line

Telephone line install for the use of a modem or facsimile machine.

Forced Busy

The caller receives a forced busy signal when the call center is too busy to handle incoming calls.

Greetings

Messages that play to callers depending on the service selected and the time of day.

Handsfree

Talking on the phone without picking up the handset. You may have handsfree on intercom but not on an outside line. A true speakerphone can communicate on an outside line without lifting the handset.

Hold

To temporarily leave to a phone call without disconnecting. You can return to the call at any time.

Hot Line (Ring-down)

The user of a single line telephone can automatically connect to a preassigned destination when the user goes off-hook.

Hunt Group

Routes calls directed to a busy telephone to other telephones in a predetermined group.

Incoming Call

A telephone call that was originated by a party remote from the local switch and that is directed toward a party on the switch.

Intercoms

An internal communications system which allows you to dial another phone in your building. It provides a dedicated talking path between two multi appearance telephones sending priority ringing.

- Automatic intercoms - allow users to depress a button and access the dedicated talking path.
- Dial intercoms - allow users to depress a button and dial a 1 or 2-digit number and access the dedicated talking path.

Glossary - continued

Jack

A receptacle used in conjunction with a plug to make electrical contact between communication circuits. Jacks and their associated plugs are used in a variety of connecting hardware applications including cross connects, interconnects, information outlets, and equipment connections. Jacks are used to connect cords or lines to a telephone system.

Last Number Dial

Allows users to automatically redial the last dialed number.

Least Occupied Agent (LOA)

Can distribute calls evenly across all available agents, balancing the workload among agents with few skills and agent with many skills. Previous routing algorithms penalized agents with multiple skills with a higher volume of calls. LOA uses agent occupancy, rather than position in an idle agent queue, to determine which agent to select when a call arrives and one or more agents are available.

Long Distance

Any telephone call to a location outside the local service area. Also called toll call or trunk call.

Manual Exclusion (Privacy)

A feature used to keep other users with whom you have a bridged call appearance from listening in on an existing call.

Master Billing

A process of including multiple cost centers on a single invoice. This is accomplished by creating a "master/billto" code to which all of the individual cost centers are assigned. The backup is sorted and subtotaled for each cost center to allow invoice separation into divisions for reconciliation but still allow ease of payment of the single invoice.

Memory Call

A family of central office based voice messaging services from AT&T.

Message Waiting

An indication that notifies users that a message is waiting in their voice mailbox or another user (usually a secretary or receptionist) has turned the light on.

Music on Hold

Background music heard when a call is placed on hold.

Multi-line Set

Telephone set that handles multiple telephone calls. Digital telephone.

Multiple Music/Audio Sources

Delivers music or customized announcements to callers while they are in queue, helping to make the waiting time more productive or entertaining. You can provide information about products, services, and other call center applications, offer public service information, or play music.

Glossary - continued

Multiple Split Queuing

Directs a call to several splits at the same time, so that the first available agent can take the call. It can help you handle your busiest periods with greater ease so you can provide faster service to your callers.

Outgoing call

A telephone call that was originated by a party associated with the local switch and that is directed toward a remote party.

Paging

Upon dialing an appropriate code, any station may make a paging announcement through all of the loudspeakers and other phones.

Port

The physical interface between a telecommunications device and a circuit.

- Analog Port – Dedicated space for a single line telephone.
- Digital Port – Dedicated space for a multi line telephone.

Priority Calling

Allows users to signal a busy telephone or call an idle telephone with distinctive 3-burst ringing. From a single appearance terminal to answer, flash, get dial tone, #7 to answer, hang up to return to the original caller, phone rings. Priority calling is used to override SAC.

Queue Call

A holding area for calls waiting to be answered in the order in which they were received. The order can be based on queue priority followed by time in queue; a higher priority call is serviced before a lower priority call regardless of time in queue.

Ringer Cutoff

Allows the user of a multi-appearance telephone to turn certain audible ringing signals on and off. Callers will continue to receive ringing on intercom and priority calls. Ring-ping notification is heard also.

Redirect-on-No-Answer

Can automatically re-route calls to different locations when they are unanswered at the original split, to help ensure that the calls will be answered and their needs met.

Remote Logout of Agents

Allows a select set of users to log out an agent using a feature access code.

Send All Calls

This feature allows a customer to immediately route calls to their coverage point.

Service Observe

A feature that provides the compatibility to automatically record data about completed calls, incomplete calls and abnormal calls for the purpose of qualitative supervision of call traffic conditions.

Glossary - continued

Single Line Set

A telephone set that handles only one telephone extension. Analog telephone.

Speakerphone

A Feature which allows that operator to converse with another party either inside the system or outside without picking up the handset.

Speed Dial

A function available on many telephone systems allowing the user to place a call by pressing a reduced number of keys. This function is particularly useful for phone users who dial certain numbers on a regular basis. In most cases, the user stores these numbers in the phone's memory for future use. The speed dial numbers are usually accessed by pressing a pre-determined key or keys on the phone, followed by a one or two-digit code which the user assigns to each number; however for ease of use, on many systems a call may be placed by pressing and holding one key on the numeric keypad.

Soft Keys

Phone buttons, usually under a LCD display, which change functions. The button function would be displayed in the LCD.

Station

An extension station is one connected "behind" a PBX or key system.

Switch

Equipment that makes, breaks, or changes the connections between telephone lines in order to establish, terminate, or change a telephone call.

Switch feature

A service provided by the switch that can be invoked by a program or by manual telephone activity.

Switch Hook

A Switch Hook, also called hook switch, is a plunger or switch where a telephone handset sits when the telephone is on hook, or hung up. When the handset is lifted, the switch hook goes up and the telephone is off hook.

Telecommunication

The transmission and reception of audio, video, data, and other intelligence by wire, radio, light, and other electronic or electromagnetic system.

Toll Free

Long distance telephone calls for which the called party instead of the calling party pays.

Touch Tone

The tones that are generated when dialing out or pressing a number on the dial pad.

Transfer

Transferring calls usually puts the caller on exclusive hold and rings the phone it was transferred to.

Uniform Call Distributor

The feature that accepts incoming calls and distributes them equally among agents in a call center.

Glossary - continued

Vector

A vector is a set of commands that define the processing of a call.

Vector Directory Number (VDN)

An internal telephone number that directs calls to a specific vector.

Virtual Routing

Helps you balance call loads among your locations by analyzing demand and directing each call to the location best able to handle it, based on call volume, waiting time in queue, or the time of day.

VDN Observing on Agent Answer

Allows a supervisor to start observing a call to the VDN when the call is delivered to the agent station. The observer will not hear the call during vector processing (announcement, music, etc.).

Voice Call

A telephone call established for the purpose of transmitting voice rather than data communications.

Voice Mail (VM)

A service that provides a telephone customer with an electronic storage mailbox that can answer and store incoming voice messages. Voice mail systems use interactive voice response (IVR) technology to prompt callers and customers through the options available from voice mailbox systems. Voice mail systems offer advanced features not available from standard answering machines including message forwarding to other mailboxes, time of day recording and routing, special announcement and other features.

Service Request Forms

Telecom Services has provided a copy of all service order request forms including the Capitol Complex service request form, the AT&T service order request form as well as telephone programming sheets to assist you when placing a service request. These forms can also be accessed on the ITS website at www.its.ms.gov.

Set Instruction Guides

2400 Series Instruction Guide

2410 (12 Buttons)

2420 (24 Buttons)

1. **Display, Call Appearance and Feature buttons:** Call Appearance Keys allow the user to handle multiple calls and the display shows call information. Details on system features (allocated by your System Administrator) can also be displayed. See Call Appearance Keys and Overview of the Functions Keys
2. **Message lamp:** Lit when the user has voicemail messages. Can also be set to flash when the phone is ringing.
3.  **Previous/Next Page:** Move through the different pages of the call handling, speed dials and call log screens. Also used to move the cursor during data entry.
4.  **Messages:** Access the user's mailbox.
5. **Call Handling Buttons:** •Hold: Place call on hold, retrieve held call. See Hold • Transfer: Transfer call. See Transfer • Conference: Conference held calls. See Conference • Drop: Drop call. See Clearing a Call • Redial: Redial last number dialed. See Redial
6. **Dial pad:** Standard 12-button pad for dialing telephone numbers.
7.  **Volume Controls:** Adjust the speaker, handset, headset, or ringer volume depending on which is currently in use
8.  **Mute:** Turns the microphone on/off. When in use, the associated light is on and the caller cannot hear you.
9.  **Headset:** Switches from handset to headset. The light associated with this button turns on when the headset is active.
10.  **Speaker:** Access the speakerphone. The light associated with this button turns on when the speakerphone is active.
11.  **Exit:** Returns you to the main call handling screen
12. **Softkeys:** Used to navigate to or initiate certain features, such as Speed Dial or Call Log, as well as control certain actions within the features. These keys correspond to the text prompts in the display screen immediately above them. See Overview of Speed Dials, Overview of the Call Log, Options and Overview of Label Changing.

Status Icons

The icons displayed on the call appearance/feature buttons of your 2400 telephone are explained in the following table. These icons replace the functionality of the green LEDs and equivalent flash rates.

2400 Series - continued

Status Icons	
Icon	Definition
 Ringing	An incoming call is waiting to be answered.
 Active	The call you are currently handling
 On hold	A call currently on hold
 On soft hold	A call put on hold during a transfer or conference.
 Feature active	Feature on left side of the display currently is active.
 Feature active	Feature on right side of the display currently is active.

2400 Series VOICE TERMINAL INSTRUCTIONS

Call Handling Features:

Answer a Call

When a call arrives at your 2400 Digital Telephone, you hear a ringing tone and a blinking bell icon appears on the associated call appearance. In addition, call identification information is displayed.

To answer an incoming call, do one of the following:

- If not active on another call, answer the call using your handset, headset, or speakerphone.
- If active on a call already, place the active call on hold and then answer the incoming call.

Make a Call

1. To dial internally 359, 432, 576, 961, 984, 987, 856 (5-digit dialing):
 1. For 359 numbers (9 and the last 4 digits, *ex. 96333*)
 2. For 432 numbers (2 and the last 4 digits, *ex. 26100*)
 3. For 576 numbers (6 and the last 4 digits, *ex. 62800*)
 4. For 581 numbers, EMSH only, (1 and 4 digits, *ex. 17500*)
 5. For 961 numbers, PSC & DEQ only (1 and the last 4 digits, *ex. 15400*)
 6. For 984 numbers, School for Deaf/Blind (4 and the last 4 digits, *ex. 48000*)
 7. For 987 numbers, DPS only (7 and the last 4 digits, *ex. 71212*)
 8. For 856 numbers, ABC Tax only, (6 and the last 4 digits, *ex. 62800*)
 9. For 662-563 numbers, DPS Batesville only, (3 and the last 4 digits, *ex. 71212*)
 10. For 664 numbers, Board of Nursing (4 and the last 4 digits, *ex. 49303*)
2. Dialing locally:
 1. Dial 90 + area code (either 601 or 769)
 2. Dial the 7-digit telephone number (*ex. 90 + 601 + 354-3333*)

2400 Series - continued

3. Dialing long distance:
 1. Dial 90
 2. Dial 1 and the 10-digit telephone number (ex. 1 + area code + telephone number)
 3. Wait for confirmation tone (3 beeps and steady dial tone)
 4. Dial your 7-digit authorization code

To have the 2400 telephone make a call automatically, do one of the following:

- Press Redial to have the phone dial the last number that you dialed
- Access the Call Log and initiate a call to a specific entry.
- Access the Speed Dial List in your personal directory and initiate call to a specific entry.

Hold

1. To put call on hold, press red Hold button. Call stays on hold until you can return to it.
2. To return to held call, press the call appearance button of the held call.

Speakerphone

1. To make or answer call without lifting the handset, press the Speaker button.
2. Place or answer the call.
3. Adjust the speaker volume if needed by pressing the volume control arrow buttons.
4. Press Speaker button again to end the call.

Transfer

1. While on a call, press the Transfer button. The caller is put on “soft-hold.”
2. When you hear a dial tone, dial the number to which you want to transfer the call.
3. Do one of the following:
4. To transfer without announcing it, press the Transfer button again and hang up.
 - a. Transfer is complete.
5. To announce the call before transferring it, wait for the called party to answer.
 - a. Go to step 4.
6. When the called party answers, announce the call.
7. Press Transfer again and hang up to complete the transfer

Conference

The conference feature allows you to conference multiple parties on a call (maximum 6 including self).

To add another party to a call:

1. Press the Conference button. The caller is put on “soft-hold.”
2. When you hear a dial tone, dial the number of the person you want to add.
3. Wait for an answer.
4. Press the Conference button again to add the new party to the call.
5. Repeat steps 1-4 for each party you want to conference into the call, maximum of 5 additional callers.

To add a held call to an active call:

1. Place all calls on HOLD.
2. Press the Conference button then press caller on HOLD, all calls will be joined together.

2400 Series - continued

To add a new incoming call to an active conference call:

1. When your phone rings, put the conference call on hold and answer the new incoming call.
2. After answering the incoming call, press the Conference button then press the line that is holding.
All calls will be joined together.

Drop

To remove the last participant added from the conference call:
Press the Drop button

Redial

Press the Redial button to redial a previously dialed number.

Send All Calls

1. Dial *3 or press the SAC button (while on-hook) if it's programmed on your phone. All calls will be sent to your cover path.
2. To cancel, dial #3 or press the Send Call button again if it's programmed on your phone.

Call Forwarding All Calls

1. Dial *2 or press the Call Forward button.
2. When you hear a dial tone, dial the extension or outside number, don't forget to dial 90+area code, where the calls will be sent temporarily.
3. When you hear the confirmation tone, hang up.
4. To cancel, dial #2 or press the call forward button again.

Call Pickup

To answer another ringing phone:

1. Dial #4 or press your Call Pickup button.

Call Park

To PARK a call:

1. With the caller on the line, press Transfer, dial *9, press TRANSFER again
2. To Retrieve a PARKED call: Dial #9 and the extension number where the call was parked

Programming Speed Dial Buttons

To manually PROGRAM speed dial (SD) buttons programmed as buttons:

- a. Lift the handset to get dial tone or use the speakerphone
- b. Dial *0
- c. Press the SD button to be programmed
- d. Dial the telephone number (if an outside telephone number, dial 90+ area code + number; if an internal ext., dial 5-digits)
- e. Press the same AD button again, then hang up

Adding Speed Dial Entries

You can store up to 48 personal speed dial entries on a 2410 and 104 personal speed dial entries on a 2420.

To add speed dial entries to your personal directory:

1. From the Home screen, Press the SpDial softkey.

2400 Series - continued

2. Press the Add softkey.
3. Using the dial pad, enter the name for your speed dial entry. You can enter up to 13 characters. By default, the first letter you enter appears in uppercase and the following characters appear in lowercase.
Note: You can use the Case softkey to switch between uppercase and lowercase. You can use the Space key to insert a space between first and last names. After you enter a space, the next character will be an uppercase letter, and the following characters will appear in lowercase.
4. When you are done, press the feature button to the left of the Number field to advance to that field.
5. Using dial pad, enter the telephone number. Don't forget to enter "90" when entering an outside line.
6. Press the Save softkey to add the information. (Press the Cancel softkey to exit without saving.)
7. Repeat steps 2-6 for additional entries.
8. To exit the speed dial application, press the Exit button to return to the Home page.

Note: The Name/Number entry is added to Speed Dial list in alphabetical order by Name.

Making Calls from a Speed Dial

1. From the Home screen, press the SpDial softkey.
2. Press the feature button for the entry you want to call. (Use the Left/Right arrow keys to cycle to other pages)

Editing Speed Dial Entries

1. From the Home screen, press the SpDial softkey.
2. Press the Edit softkey.
3. Press the feature button corresponding to the entry you want to edit.
Note: To move to the end of any text displayed on the Name line, press the button to the right of the line. To move to the beginning of any text, press the button to the left of the line. Press the feature button to the right of Insert Mode so that you can backspace without erasing characters during text entry.
4. Using dial pad, edit the Name.
5. When finished, press the feature button to the left of the Number field.
6. Using dial pad, edit the number.
7. When done with changes, press the Save softkey.

Deleting Speed Dial Entries

1. From Home screen, press the SpDial softkey
2. Press the Delete softkey.
3. Press feature button corresponding to entry to be deleted.
4. The "Delete this entry?" prompt is displayed. Press the Yes softkey to delete.

Call Log

Viewing the Call Log

1. From the Home screen, press the Log softkey.
2. Use left/right arrow buttons to scroll through the Call Log Summary pages.
3. To view information about a specific entry, press the button corresponding to the entry.

Making Calls from the Call Log

1. From the Home screen, press the Log softkey.
2. Use left/right arrow buttons to scroll through the Call Log Summary pages.
3. When you locate an entry you want to call, press the button corresponding to the entry.
4. Press the Call softkey to make the call.

Saving a Call Log Entry to Your Speed Dial List

1. From the Home screen, press the Log softkey.
2. Use left/right arrow buttons to scroll through the Call Log pages.
3. When you locate the entry to be saved, press the button corresponding to the entry.
4. Press the Save softkey.
5. Do one of the following:
 - a. To save entry as shown, press the Save softkey.
 - b. To edit, press the button to the left of the Number line twice. Then enter your changes. When you are done entering changes, press the Save softkey.

Personal Settings/ Options

To access the personal options application:

1. Step 1 is to press any softkey at the bottom of your Home screen.
2. Step 2 is to press the Options softkey from the Home screen.
3. To select an option, press the feature button for the desired option
4. To return to the Home screen, press the Exit button.

Ring Pattern

1. Press the Ring Pattern feature button.
2. Use the arrow keys to cycle through the eight ringing patterns.
3. Press the Save softkey if you want to save the pattern that you just selected.

Display Contrast

1. Press the Contrast button
2. Use the arrow key to adjust the level of contrast. The display shows the contrast level for the EU24 module also.
3. Press the Done softkey to return to the Options screen.

Call Log Setup

You can program the 2400 to log any or all of these call types:

1. Answered (incoming)
2. Unanswered (incoming)
3. Outgoing

To specify the call types you want to appear in the Call Log:

1. From the Home screen, press the Option softkey.
2. Press the Log Setup feature button.
3. Press the appropriate button on the right side of the display.
4. Press the Save softkey. You will hear confirmation tone, and you are returned to the Options screen.

Note: If you press the Save softkey to change settings, all entries that do not match the call types you have just specified will be deleted from the call log.

2400 Series - continued

Visual Ring

When you enable this option, the telephone rings and the lamp above the AVAYA logo flashes when an incoming call arrives.

1. Press the Visual Ring feature button.
2. Press the Yes/No softkey to indicate whether you want Visual Ring enabled.
3. Press the Save softkey.

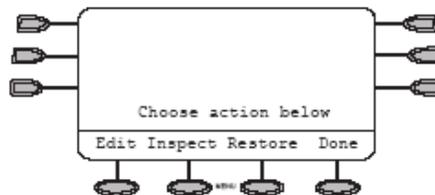

Label Screen

The Label screen, which is accessed by pressing the Label softkey at the Home screen, allows you to:

1. Customize the labels for the call appearance/feature buttons programmed on the telephone.
2. View the system labels for the call appearance/features buttons programmed on the telephone.
3. Erase the labels you modified for the call appearance/feature buttons and restore the system labels from the telephone.

Working in the Label Screen

Working in the Label Screen	
To	Press
Change the label of a call appearance/feature button	To Edit softkey
View the system labels for the call appearance/feature buttons	To Inspect softkey
Delete the customized labels of all the call appearance/feature buttons and restore all the system labels.	To Restore softkey
Return to the Home screen in which you worked previously	The Done softkey. See the following Note.
Return to page 1 of the Home screen	 Exit at any time

Note:

When you manage the labels of your call appearance/feature buttons, the softkeys displayed at the bottom of the screen change to reflect the activities you can perform.

Note:

Whenever you change the labels of call appearance/feature buttons in the Label Select screen, you cannot use the telephone dialpad for dialing.

Editing Labels

You can change the labels of the call appearance/feature button on your telephone. These new labels are stored in your 2400 series telephone.

2400 Series - continued

To edit call appearance/feature button labels

1. If the softkey labels are not displayed, press any softkey button to display the softkey labels.
2. From the Home screen, press the Label softkey.
3. Press the Edit softkey.

The Label Select screen appears.

Note:

You can use  and  to locate the label you want to edit.

4. Press the feature button on the 2400 series telephone that corresponds to the label you want to edit.

The Label Edit screen appears. The New label field displays the current customized label (if any), and the System Label field displays the system label. If you have not yet changed the system label, a cursor appears next to the New Label field. If you selected a call appearance, a letter (such as “a”) and a space appear next to the New Label field. You can delete the letter and space by pressing Backspace feature button twice.

If you have already changed the system label, a cursor appears after the last letter of the information displayed in the New Label field.

5. Using the dial pad, edit the label. You can enter up to 13 characters. By default, the first letter you enter appears in uppercase, and the following characters appear in lowercase.

Note:

You can use the Case softkey to switch between uppercase and lowercase. You can use the Space softkey to insert a space between words. If you are entering special characters, you can use the * (star key) to cycle through the period and star characters. You can use the # (pound key) to cycle through the hyphen and pound characters. You can use the Backspace feature button to delete the character to the left of the cursor. You can use the Clear feature button to delete all the characters in the field. Use  to move the cursor to the left without erasing characters. Use  to move the cursor to the right without erasing characters.

Note:

If you want to restore the system label, press the Clear feature button to delete all the characters in the field. Leave this field blank, and see Step 6.

6. When you finish making changes, perform one of the following steps:

6. You'll hear a long beep and the light above the MUTE button goes out

Tips regarding Panasonic sets: The two main things to do whenever your Panasonic acts up are to try replacing the batteries and also to find the switch (at the back or on the side) that says "tone/pulse" and make sure it is always on tone. Pulse doesn't work correctly with our telephone system.
