File Maintenance

Items Section

This section would be redesigned in order to allow staff to make price changes and maintain the current contract without having to access so many screens and make so many calculations.

The plan is to have a general screen with tables that would take you to: Item Information, Manufacturer Contracts, Distributor Contracts, Approved Brand Information.

Other general information as well as current pricing for the selected region would appear on the screen (See attached). Calculators would be built in that would total the Unit Cost + Freight (If any) + Fixed Fee = Net Price. The Package Unit figure (if bid unit is less than 1 case) would multiply that figure times the Net Price to produce the Package Unit Price. If bid unit is case then the multiplier would default to 1. For example for a case of 50 hamburger patties where the bid unit is each and net price is .10/patty the system would multiple $.10 \times 50 = \$5.00$.

At the bottom the staff could choose which region to apply this pricing to. The system would transfer the data to each region chosen without overwriting any regions that are not chosen.

Example: of what she wants (after screen)
